**In a manual transmission system the fluid tends to become contaminated over time, with the wear and tear of the various components causing some debris to fall into the fluid. These particles will float around in the oil, and the contaminated oil won't lubricate the components as well as fresh oil. This can have a negative impact on the lifespan of your transmission.**

**In a manual transmission, when you select a different gear, what you really are doing is coupling a different set of gears to the input and output shafts in the transmission. The theory is similar for an automatic transmission, but the gears are arranged in a much different way. The planetary gear set in an automatic transmission is named such because there is one large gear in the middle with ...**
