For optical systems, OAM provides a degree of freedom in the light field that has shown promise for dark-field confocal microscopy , superresolution microscopy , new approaches to multimode fiber communications , secure communication schemes utilizing quantum key distribution , and free-space communication systems that are robust to atmospheric turbulence [9,10]. OAM mode discrimination is ...

Using fiber draw techniques developed for communications fiber it meets these two requirements, and photonic crystal fibres are commercially available. Another promising method for developing two-dimensional photonic crystals is the so-called photonic crystal slab. These structures consist of a slab of material—such as silicon—that can be patterned using techniques from the semiconductor ...
